APPENDIX D – EXAMPLES OF TRACE FUNCTIONS ACROSS SCALE CONTINUUM

In Chapter 5 item analysis was used to examine the properties of individual items. For illustrative purposes, an example of the functions that were used to make decisions about the suitability of the items is presented here. Two examples are presented. The first is for an item which was regarded as meeting the set criteria (a good pair of shoes); the second is for an item that did not meet the criteria (dishwasher).

A good pair of shoes

Figure D1: Importance Ratings for a good pair of shoes: Māori, non-Māori, population
*Figure D2: Importance Ratings for a good pair of shoes: Single persons, couples, population*

Figure D3: Importance Ratings for a good pair of shoes: with dependent children, without dependent children, population
*Figure D4: Importance Ratings for a good pair of shoes: age 18 to 64, 65 and over, population*

Figure D5: Proportion wanting[25] good pair of shoes: Māori, non-Māori, population

---

[25] Note that 'wanting an item' is operationally defined as either having the item or having an enforced lack of an item.
